

Momentum Microsystems configuration services include the installation of hardware and/or software and the burn-in and set-up to integrate the new configuration. Our high-touch configuration services are used most commonly by our OEM, ISP, and VAR partners supporting end-user clients' special requirements. For example, we can set up a test and assembly station at a designated site, or we can provide the configuration activities in our facility in a controlled environment. We will customize our configuration services to meet your needs.

Clients benefit from an enhanced control of IT assets and lower cost-of-ownership through integrated web-based procurement and management systems, order management logistics and advanced integration services. With Momentum Microsystems as your single source for workplace hardware and software, you can simplify the complexity of IT asset acquisition, configuration, and deployment, while enjoying the cost benefits of Momentum Microsystems leverage as one of the most reputable national resellers for distributed technology products.

Momentum Microsystems provides preconfigured solutions for each of today's leading enterprise and On-Demand applications. These solutions, built using the Integra E-Business ERP System, offers out-of-the-box connectivity to specific applications, and packaged integration processes (PIPs) for the most common deployment scenarios.

Momentum Microsystems solutions enable customers to rapidly complete application/product-specific integrations using a "BOM" approach. By using a pre-configured BOM, rather than starting from scratch with complex hardware and software certification enterprises complete business-critical projects in days rather than months. Large and midsize companies in a variety of industries use Momentum Microsystems Integration Solutions to solve their most common integration needs.

Quality is something we all strive for and expect when we buy products and use services. Quality encompasses not simply the product or service offering itself, but how it was provided to you - the supply-chain of inter-connected processes that had to work together to get it to your door.

Momentum Microsystems offers OEMs the unique service of handling build-up of equipment from components to completed system. We maintain close relationships with Tier Manufacturers, so you can confidently turn the complete project over to us - we can manage all aspects of the job, from the product selection and integration into the finished product.

This approach will help you reduce your cost of ownership by standardizing your hardware configurations. We offer installation of hardware components and appropriate drivers for complete systems as well as for equipment such as network interface cards, modems, video cards, sound cards, hard drives, and internal storage devices. We provide configuration services and custom hardware setting for CMOS/BIOS, jumpers, and ports - and we offer hard drive partitioning, special scripting, configuring arrays, duplex, mirror and RAID of all levels.

Momentum Microsystems is dedicated to high quality and dependable workmanship in everything we do. Our custom integration will ensure that you're making the best possible use of your equipment by having your hardware installed and configured accurately. The resulting standardization of your systems makes them easier to maintain and upgrade. Savings in staff time are realized by simplified training; systems administrators will be able to keep all your systems operating efficiently with a minimum of compatibility problems.

Momentum Microsystems will build your system to meet your special requirements. We can customize not only your hardware, but also the software needed to meet your specific needs. We offer Microsoft Windows, Apple OS X and Linux operating systems, plus standard Microsoft office tools. In addition to your OS, we will integrate any other software you choose, including specialized applications or other solutions. In our state-of-the art facility, we install the standardized applications you need, thus ensuring that your users will have compatible software - and no problems due to incomplete installation or wrong versions.

Whether you need basic software installation of off-the shelf programs, or customized services involving different applications and operating systems, Momentum Microsystems will deliver a software integration program that works for you.
