

As a network integrator, we often function as a partner to our customers, readily supporting their daily business as well as strategic network infrastructure projects. We design, implement, monitor and support IP communication networks for medium to large enterprises and organizations. The more intensive the IP communication is, the more the customer will benefit from dealing with a specialist in the field.

Creating a well-planned installation or migration path is the key to a successful implementation project. There is nothing more important than minimizing, or in many cases, eliminating the down-time associated with network system and infrastructure upgrades and migrations. With careful planning techniques customized to accommodate your company's day-to-day operations, Momentum Microsystems can seamlessly implement your network solution.

Our engineers have experience designing networks for companies of all sizes, from multi-national corporations to home offices. We offer total solutions that encompass network infrastructure, Microsoft Active Directory, and disaster recovery solution designs.

We follow best practice guidelines for all the products we promote, in order to provide our clients with the peace of mind that their networks are built, from the ground up, to be as stable and functional as possible. We are on your side, and want to see your business flourish almost as much as you do. To facilitate the most painless growth possible, we design cost-effective networks that allow for future expansion of not only the network, but your company as well.

We approach every situation as a project. Before beginning any project engagement, a Project Manager creates a project plan for the scope of work. This project plan is the road map to success; it includes the project statement of work, and the technical details and delivers to the client a tangible project plan complete with budget, timelines, man-hours, deliverables and equipment. The project plan sets expectations and creates measurement and performance criteria for success. This methodological approach is a company differentiator for Momentum Microsystems.

We have a full array of programs customized to meet your business and fiscal needs. Our certified engineers provide reliable post-warranty support for products across multiple platforms, including:

- IBM
- Hewlett Packard
- Apple
- Computer Associates
- Oracle
- Cisco
- Microsoft
- Symantec
- Barracuda
- APC

Bottom Line: Momentum Microsystems works behind the scenes to help your competitive edge and accomplish your business goals by delivering products that streamline your IT environment for operational excellence by making your network dependable, secure and agile.
